EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Andrew Wilford on January 9, 2006.

The application has been amended as follows:

In the claims:

Claims 13 and 14 have been cancelled.

Claims 1 and 12 have been amended as follows-

1. An apparatus for sorting small objects, the apparatus comprising
a trough having a longitudinally extending groove along which the objects can slide, the groove having a floor formed with a throughgoing slot of a width substantially smaller than a predetermined minimum object width, whereby if any of the objects is of a width smaller than the minimum object width it will fall through the slot as it slides along the floor, the floor being formed to one side of the slot with a roughening forming a braking formation that engages and rotates the objects about vertical axes as the objects slide past the slot, the objects engaging the one side with the roughening with greater friction than the other side.
12. An apparatus for sorting small cylindrical objects, the apparatus comprising

a trough having a longitudinally extending groove along which the objects can slide, the groove being of generally rectangular upwardly open shape and having a pair of upright and horizontally spaced side walls and an upwardly directed floor bridging lower edges of the side walls, the floor being formed offset from the side walls with a vertically throughgoing slot of a width substantially smaller than a predetermined minimum object width, whereby if any of the objects is of a diameter smaller than the minimum object width it will fall through the slot as it slides along the floor, one of the side walls being formed at the slot with a roughening forming an inwardly directed braking formation engageable with the objects as they slide past the slot to rotate same about vertical axes, whereby the objects engage the one side with the roughening with greater friction than the other side.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The feature of a roughening forming a braking formation, whereby objects engage the one side with the roughening with greater friction than the other side renders the invention novel and non-obvious over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
